LAB1-UseCase-Flow

Main Success Scenario:

- Individual User selects the “Add Subscription” option.
- System displays a form requesting the subscription name, amount, billing frequency, and renewal date.
- Individual User enters valid subscription details.
- System validates the entered information.
- System stores the subscription details in the user's records.
- System updates the user's recurring expense information and displays a confirmation message.

Alternate Scenario:

- If any subscription detail is invalid or incomplete, the system displays an “Invalid Subscription Details” message.
- Individual User is prompted to correct the missing or invalid information.
- Individual User submits the corrected subscription details.
- If the details are valid, the system stores the subscription and updates the recurring expense information.
- If the details remain invalid, the system displays the error message again and requests another correction.
