Req ID	Type	Description	Priority	Acceptance Criteria	Rationale	Comments
FR-001	Functional	The system allows the user to add and store subscriptions by entering its name, amount, billing frequency and renewal date.	High	When valid subscription details are entered, the system shall store the subscription and display a confirmation message.	Enables users to maintain a record of their active subscriptions .	
FR-002	Functional	The system allows the user to view their active subscriptions and associated recurring expenses.	High	When the user requests the subscription list, all currently active subscriptions and their recurring amounts shall be displayed.	Allows users to monitor their subscriptions and recurring expenses.	
FR-003	Functional	The system calculates and displays the user's total recurring subscription expenditure for a selected time period.	High	When a valid time period is selected, the system shall display the calculated total recurring expenditure for that period.	Helps users understand and monitor their recurring financial commitments .	
FR-004	Functional	The system notifies the user before the renewal date of an active subscription.	Medium	For an active subscription with a recorded renewal date, the system generates a reminder before the renewal date according to the configured reminder period.	Helps users avoid unexpected subscription renewals.

FR-005	Functional	The system allows a finance auditor to generate a report summarizing the user's recurring subscription expenses for a selected time period.	Medium	When the finance auditor selects a valid time period and requests a report, the system shall generate and display a report containing the corresponding recurring subscription expenses.	Supports review and auditing of recurring subscription expenses.	
NFR-001	Non functional	The system displays a recurring expense summary within 3 seconds of receiving a valid request.	High	In at least 95 out of 100 valid summary requests under normal operating conditions, the recurring expense summary shall be displayed within 3 seconds.	Ensures a responsive user experience when viewing financial information.	
NFR-002	Non functional	The system allows access to financial records only to authenticated and authorised users.	High	When an unauthenticated or unauthorised user attempts to access financial records, the system shall deny access.	Protects users' financial and subscription information from unauthorised access.
